Assignment 4

10/21/2026

28 Points Possible

Details

The last two problems use **Tellurion (https://go.umd.edu/tellurion)** . You must save your work to your own Google Drive space, and then turn the notebook files in with the **form (https://forms.gle/TEANWTPD2J6BGDXr9)** . You can also upload other files with code for other problems.

1. Curtis problem 2.45 - use the ΔE Lagrange coefficient method I showed in class
2. Curtis problem 7.7
3. Curtis problem 7.8
4. Curtis problem 7.10
5. **Orbit propagation with STM (https://colab.research.google.com/drive/1Ws0EPY41HNLI1lsJPDO0fWl0RZnkHhdJ?usp=sharing)**
6. **Lambert problem (https://colab.research.google.com/drive/1PxGhzayzr_Ih-dqqVxrioK677hs9Nrph?usp=sharing)**
